## **ABSTRACT**

Cloud computing is the facility of information technology, which is based on internet. It's a solution of many problems of computing. It's a big network of internet which connected all computers in the world. By using this network user easily transfer or receive the data from one side to another side.

At present,information technology based on cloud computing. We can't touch it,while work On it. It has given us allots of infrastructure . To understand the cloud computing we can compare the cloud computing with natural cloud. Natural cloud where lots of water, which makes by earth and transfer to the cloud and after some time it again received by the earth. Similarly, in cloud computing user give the data or information to the system.
